[Go update all modules](#) (2 answers)

Closed 1 year ago.

the `go mod tidy` adds package dependencies to the `go.mod` file. How we can update them automatically without manually editing `go.mod` file, e.g. by removing some entries? For instance, if I use `make` I want to add a similar command that can update all dependencies of my package/repo and then compile the code with latest version of package dependencies.

`go` `dependencies`

In order to update all the dependencies you need to use:

`go get -u`

And then `go mod tidy`.

`go get -u` updates all packages and their dependencies, changing the `go.mod`.
